

BCS_RSA_Color_Norming_Native

Participant Demographics

Language status

SIMK and foreign speakers were excluded from this analysis.

Foreign: first language and language spoken at school are not BCS

Heritage: first language is BCS and language spoken at school is not BCS

SIMK: Country of origin is Slovenia (SI) or Macedonia (MK)

native: first language and language spoken at school are BCS

Dialect Information

Dialect Measure 1

Dialects are often split up based on the phonological change of the Common Slavic *jat* vowel (*ě), which changed to /i/ (Ikavian/Ikavica), /e/ (Ekavian/Ekavica), or /ije/ /je/ (Ijekavian/Ijekavica). Standard

Croatian and Bosnian is based on Ijekavian, whereas standard Serbian is based on Ekavian. Serbians in Croatia, Bosnian Serbs, and Montenegrins mainly use Ijekavian. A geographic distribution is shown below.

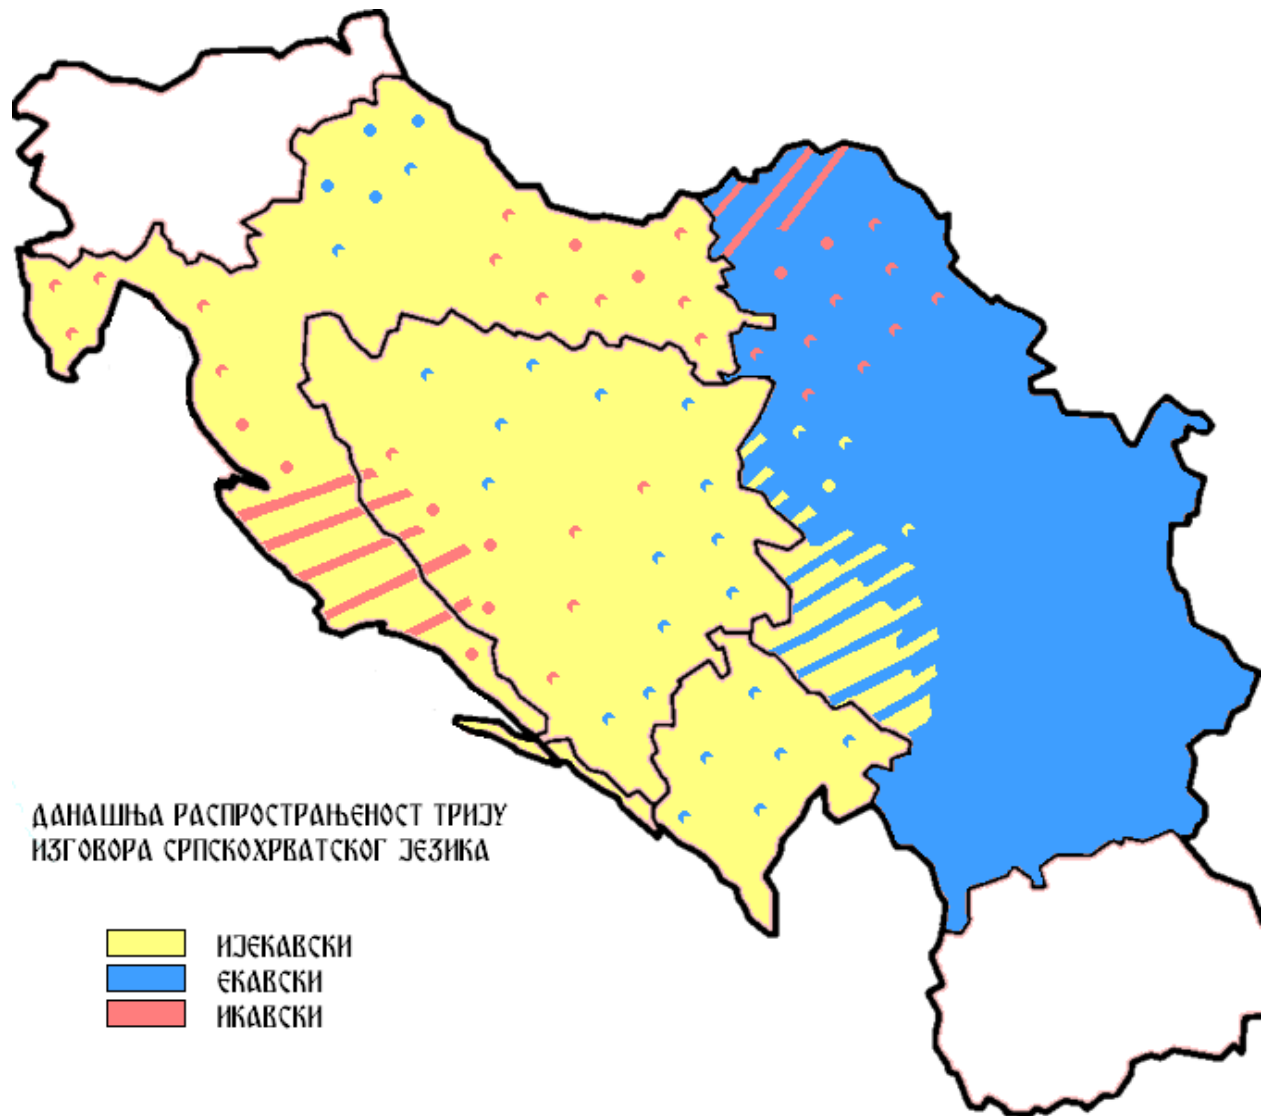

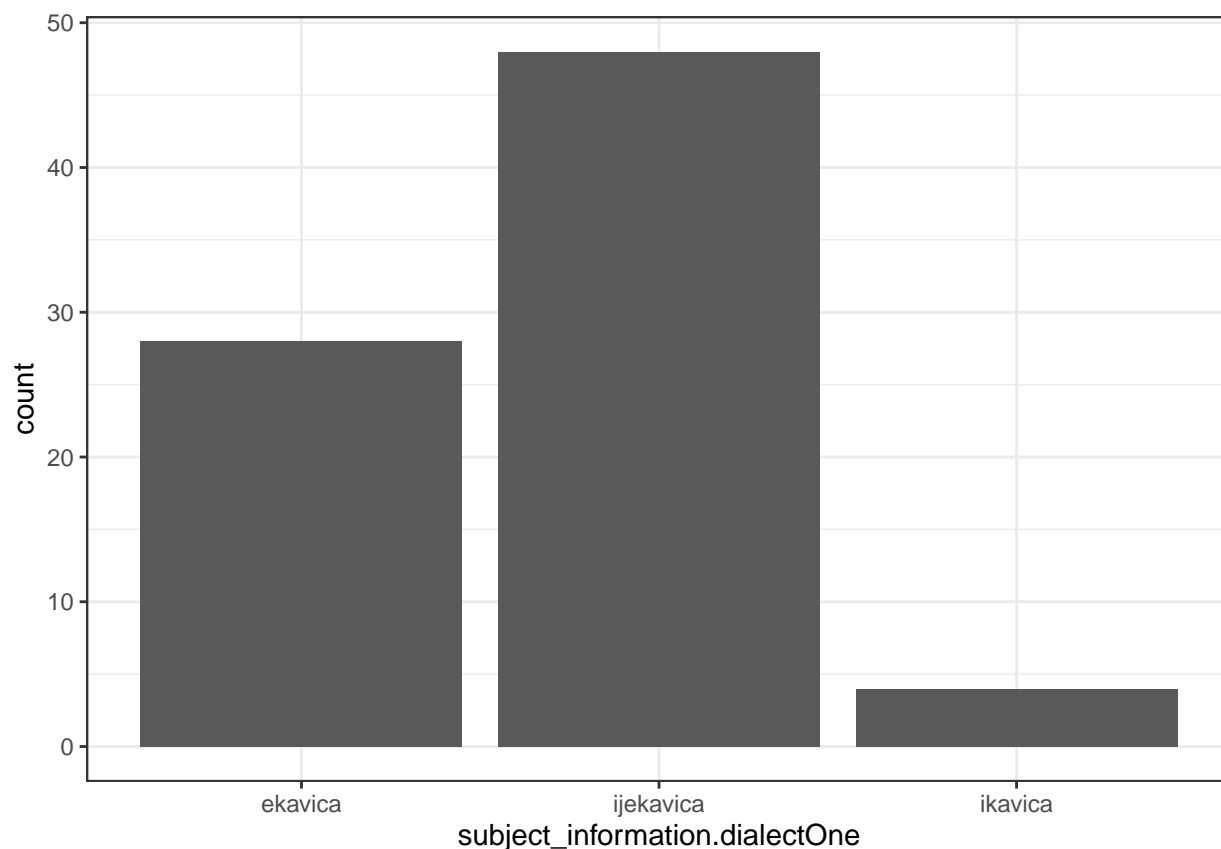

Figure 1: alt text here

yellow: ijekavica

blue: ekavica

red: ikavica

Our participants had the following distribution:

Dialect Measure 2

Another common way of classifying the dialects is based on their most common question word for “what”:

Shtokavian (Štokavski) = što/šta

Chakavian (Čakavski) = Ča/ca

Kajkavian (Kajkavski) = Kaj/key

Shtokavian is the standard for all of BCS and is spoken in Bosnia and Herzegovina, Croatia, Montenegro, and Serbia. Chakavian is spoken on the Croatian coast and Kajkavian is spoken in northern Croatia. Slovenians use the word “kaj” for the “what” question word, therefore I assume Slovenians would be classified as Kajkavian speakers based on my dialect survey (even if they don’t produce the word “kaj” when speaking BCS).

The map below gives a geographic distribution of the three dialects in Croatia. Bosnia and Herzegovina, Montenegro, and Serbia would all be colored green based on this map.

Chakavian (blue) = Čakavski

Kajkavian (purple) = Kajkavski

Shtokavian (green) = Štokavski

Our participants had the following dialect distribution:

Figure 2: alt text here

Country of participants

Participants answered the question: In which Ex-Jugoslav country did I live in/spent a lot of time in. This question aims to get a geographic distribution of participants. While we can classify speakers across ekavian/ikavian/ijekavian dialects, since this distinction represents a phonological one, it is unclear whether it will likewise reflect a difference in use of lexical items. Keep in mind that the answer to this question is distinct from what nationality participants identify as (for example there are Serbians, Croats, and Bosnians who all live in Bosnia and Herzegovina). Based on my (limited) observations, I believe that country may be a better predictor of lexical items than national identity could be.

BIH: Bosnia and Herzegovina

HR: Croatia

SRB: Serbia

SI: Slovenia

MK: Macedonia

MNE: Montenegro

Colors

A quick reference guide to colors in BCS. The longer responses are often compounds of multiple colors.

Analysis of which words should be used

Here are all the responses that were under threshold:

Figure 3: alt text here

	item	label	percent	color	object
## 1	orange_piano	smedje	0.4230769	orange	piano
## 2	white_fryingpan	belo	0.4375000	white	fryingpan
## 3	white_bike	belo	0.4444444	white	bike
## 4	orange_bench	narandzasto	0.4761905	orange	bench
## 5	orange_razor	narandzasto	0.5454545	orange	razor
## 6	orange_boot	narandzasto	0.5625000	orange	boot
## 7	black_shield	crno	0.6111111	black	shield
## 8	orange_umbrella	narandzasto	0.6111111	orange	umbrella
## 9	yellow_fryingpan	zuto	0.6111111	yellow	fryingpan
## 10	orange_airplane	narandzasto	0.6315789	orange	airplane
## 11	orange_spoon	narandzasto	0.6500000	orange	spoon
## 12	orange_tent	narandzasto	0.6785714	orange	tent
## 13	orange_ladle	narandzasto	0.6818182	orange	ladle
## 14	orange_box	narandzasto	0.6842105	orange	box
## 15	white_key	belo	0.6842105	white	key
## 16	orange_cake	narandzasto	0.6923077	orange	cake

There were 16 responses that were under the 70% threshold.

Of those, these are the instances where the majority is not the color we expected:

	item	label	percent	color	object
## 1	orange_piano	smedje	0.4230769	orange	piano

That is:

orange_piano -> “smedje” (brown)

The color distribution of the items that did not meet threshold are as follows:

```
## # A tibble: 4 x 2
## # Groups:   color [4]
##   color      n
##   <chr> <int>
## 1 black      1
## 2 orange     11
## 3 white       3
## 4 yellow      1
```

Let’s take a look at them color by color:

Black

	item	label	percent	color	object
## 1	black_shield	crno	0.6111111	black	shield

Out of a total of 18 black shield objects, 4 contained the a compound color of black and brown. This is most likely because the shield had a brown border. We can either leave it as is, or I can get rid of the brown border and make the shield entirely black. It is possible that these 4 responses are overzealous participants who want to be as informative as possible.

Orange

	item	label	percent	color	object
## 1	orange_airplane	narandzasto	0.6315789	orange	airplane
## 2	orange_bench	narandzasto	0.4761905	orange	bench

```
## 3      orange_boot narandzasto 0.5625000 orange    boot
## 4      orange_box narandzasto 0.6842105 orange    box
## 5      orange_cake narandzasto 0.6923077 orange    cake
## 6      orange_ladle narandzasto 0.6818182 orange    ladle
## 7      orange_piano      smedje 0.4230769 orange    piano
## 8      orange_razor narandzasto 0.5454545 orange    razor
## 9      orange_spoon narandzasto 0.6500000 orange    spoon
## 10     orange_tent narandzasto 0.6785714 orange    tent
## 11 orange_umbrella narandzasto 0.6111111 orange umbrella
```

There are a total of 11 orange items that do not meet the 70% threshold out of a total of 52 items, meaning that 21.1538461538462% of orange items do not meet the threshold.

Qualitatively looking through the responses, a lot of them include compounds and/or the words “braun” “smedje” (both meaning brown).

This really comes down to how we want to treat compounds. If we choose to count compounds like “orange-brown” as orange, then some of these may reach threshold.

orange_piano has a majority of responses of “brown”

White

```
##          item label  percent color    object
## 1      white_bike  belo 0.4444444 white     bike
## 2 white_fryingpan  belo 0.4375000 white fryingpan
## 3      white_key   belo 0.6842105 white     key
```

These did not reach threshold due to answers for “silver” and “grey”

Yellow

```
##          item label  percent  color    object
## 1 yellow_fryingpan  zuto 0.6111111 yellow fryingpan
```

All responses that were not “yellow” were “golden” (7).

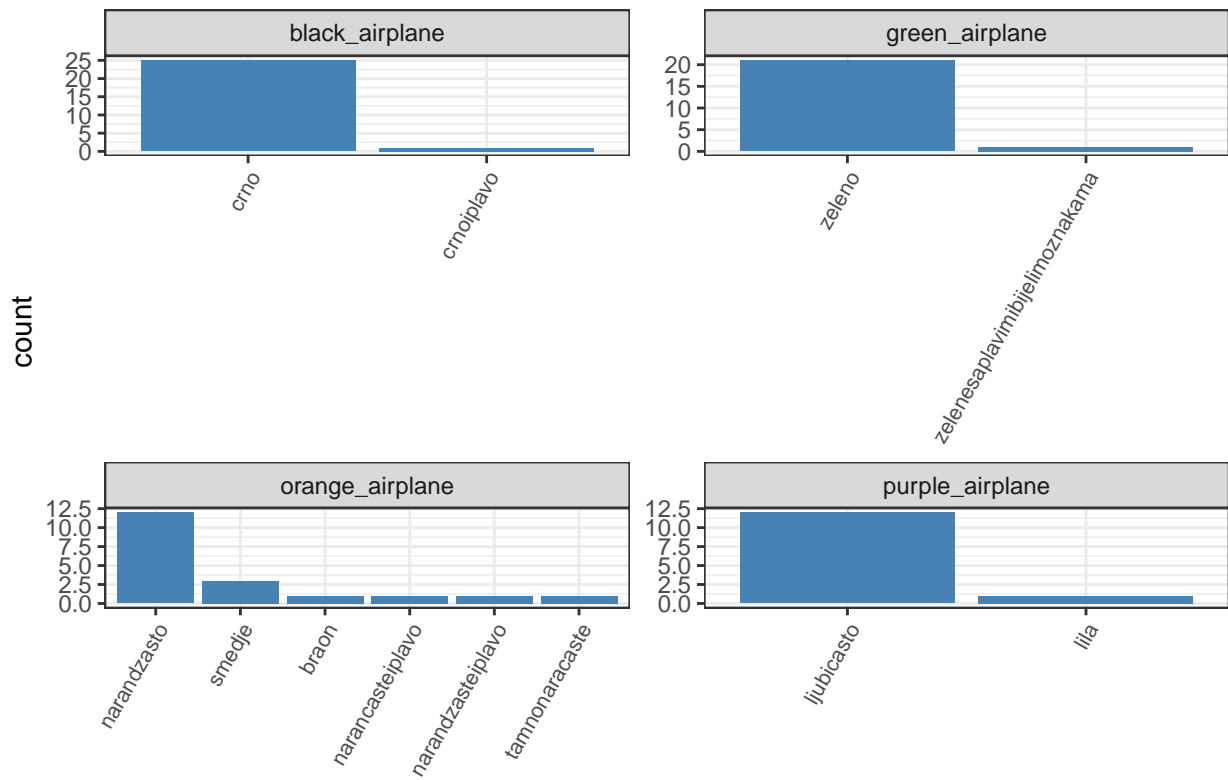

Participant Responses

Responses that participants gave to the question “What is the color of this object?” are given below. Each graph is faceted based on the color the object was presented in.

Percent of people who answered with the most common answer:

```
## [[1]]
```

airplane

[[2]]

armchair

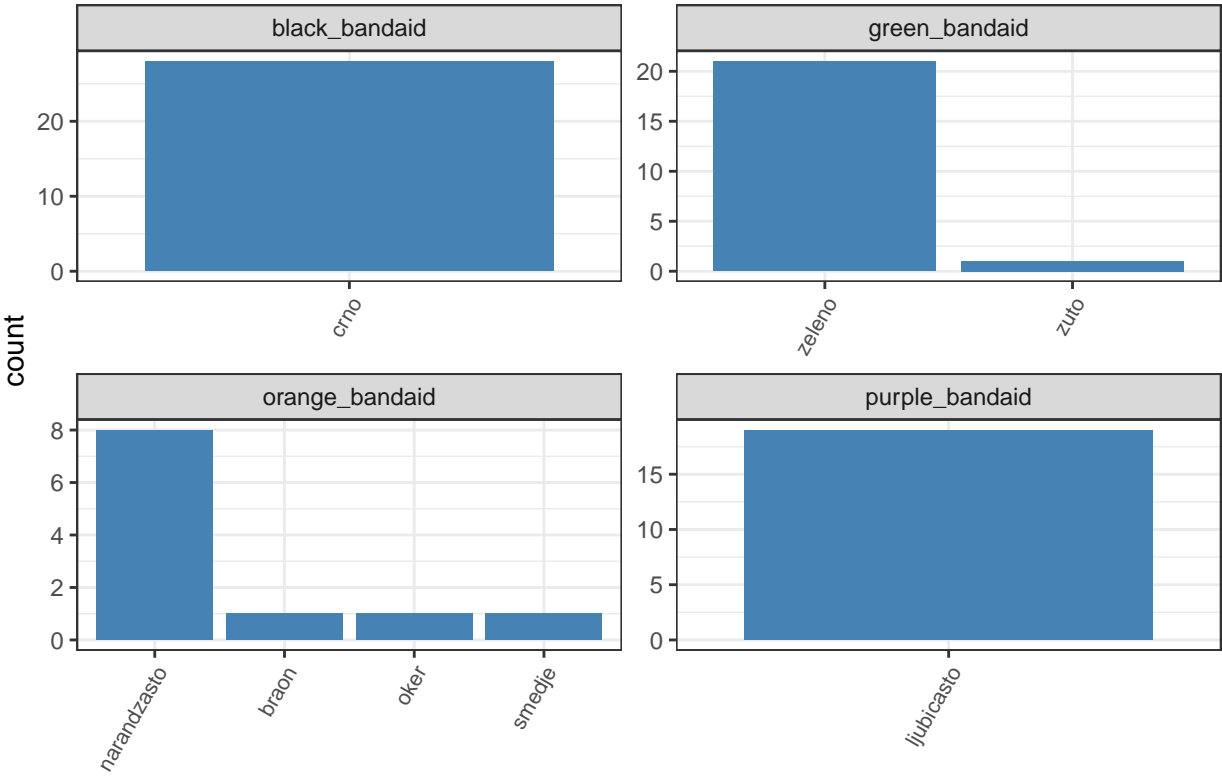

[[3]]

balloon

[[4]]

bandaid

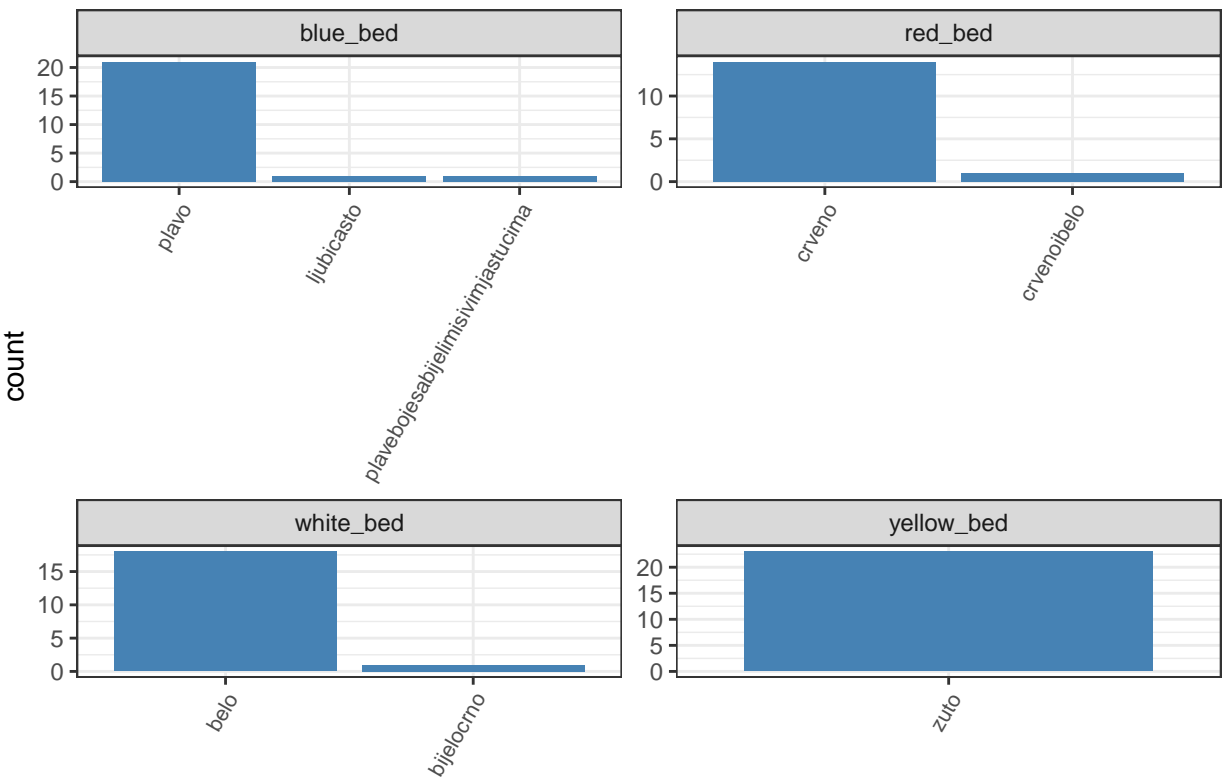

[[5]]

basket
